FLOATING FLANGED

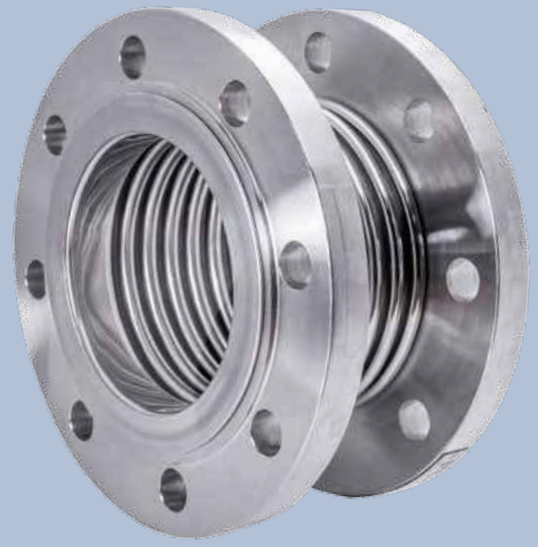

Expansion Joints

Floating flanged expansion joints are equipped with carbon steel or stainless steel flanges (EN, ASME or as requested). It absorbs mainly axial movements with possibility of some lateral movements.

Even though they can absorb movements in any direction, this type is mainly used for axial movements. If lateral movement is requested, a universal type may be more suitable. These type of expansion joints can be supplied with limit rod, liners, covers, rods, hinges or gimbals.

Available for exhaust gas, liquid medium and steam. Bellows are calculated following latest EJMA standards.

Also, floating flange type expansion joints may have a double bellows which are designed for absorbing the higher lateral movements.

Advantages

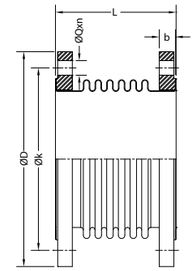

- Quick connection
- Easy installation for existing systems
- Easily replaced
- Flanges are not in direct contact with media due to bellows
- Flange misalignment with customer's flange is prevented

Applications

- Hot & Cold water pipelines
- District heating pipelines
- Steam pipelines
- Shipbuilding and exhaust systems
- Geothermal water applications
- Process based fluids

DESIGN VALUES

Bellows Material	304, 316, 321
Flange Material	Carbon Steel, Stainless Steel
Flange Norms	EN 1092, ANSI B16.5, JIS
Design Pressure	2.5 barg
Design Temperature	550°C
